#### REPORT OF THE DEPARTMENT:

Mrs. B. Sashi Rekha, Asst. HOD & Asst. Prof. in Commerce gave a brief overview of the department. She also briefed the meeting on the changes in the syllabus. Syllabus for I and II semester for 2021 -2022 batch was passed in the first BOS meeting held .

The changes made in the present syllabus will be applicable to 2022 onwards and III to VI semester of 2021 batch.

- 20% changes have been made in the theory subjects.
- No changes are made in accounting papers.
- New programs are included in the Computer Practical papers.
- New programs are added to Tally Practicals.
- Field visits and practical training are included in the required subjects.
- Institutional training will be considered for internal marks.

## **PASSING OF THE SYLLABUS**

Dr. Beulah Vijayarani, HOD & Chairman, BOS, requested that the syllabus submitted by the department for B.Com., be accepted and Passed for III, IV, V and VI semesters and for those being admitted from 2022 onwards. The proposed syllabus was unanimously approved and passed.

## **COMMENTS**

**Dr. Padmavathy**, Head, Associate Professor, Sri Ramakrishna College for Women, Coimbatore made the following comments:

- She congratulated the Department on the good results, smooth functioning and co-ordination
- Since Digital Marketing is the way ahead for Commerce students, she was happy that it was included in our syllabus for B.Com.

**DR. MOHANASUNDARAM**, Head & Associate Professor, Dept. of Commerce, Periyar University, Dharmapuri expressed the following:

- 3 Credits = 6 hours, but as per UGC norms one credit = 1 hr. Mrs. Sashi Rekha said that we would change it. Dr. Beula said that based on the University pattern, we are not deviating.
- At least 10 – 20% of the students are receptive to advanced learning, professional training could be given to these students.

**MRS. SUBASHINI**, Chartered Accountant, Founder Partner – Subhashini & Associate LLP, Chennai made the following comments:

- A basic need for B.Com students is to know the statutory norms in connection with Tax and Compliances. B.Com. graduates, though they are studying the required papers, they are still not full-fledged to work as Accountants. The gap needs to be filled in the college itself so that they are competent to start working.
- There are lots of opportunities in the pharmaceutical organization in and around TN for students of Commerce, so they should explore this field.
- We should compel students to take up workshops and gain computer knowledge which will help them in jobs.
- Data Analytics needs more attention.

**MR. KHIVRAJ**, Proprietor, Vaishali Enterprises, Coonoor commented as follows:

- Providence College has taken good initiative to make students semi-professional
- We have made 20% changes in the syllabus-slow steps with certain amount of certainty is a good start.
- Webinars is a good sign to enhance the learning of students
- Once interest develops, concentration to the course material will improve and objectives will be met.
- Including a topic on the local industry is a good initiative, but more exposure needs to be given to introduce students to the real working environment. When students realize what they are studying and when they start working they will realize the significance of their portions

- Tea is not the only unique industry in the Nilgiris, even coffee is grown in Gudalur along with spices and Rubber in Gudalur. Tea has 3 main branches: cultivation, manufacture and different varieties of teas and flavours offered for direct brew and dipped tea. This will provide life-long employment.
- The Commerce Department can work with the Botany department in the field of Organic Vegetables.
- Apart from these, students can also be taught chocolate making and baking in their certificate courses.
- The examination and evaluation process should be strengthened to check if the students have understood the concept.

**VOTE OF THANKS:**

Dr. M. Gomathi, Asst. Prof. in Commerce proposed the Vote of thanks.

PEO1	The courses have been designed to benefit all Botany students to study various aspects of Plant sciences including its practical applications.
PEO2	Keeping in mind that these students can take up teaching at different levels, research work in research institutes or industries, doctoral programme, floristic study, ecological survey, environment impact assessment, biodiversity studies, entrepreneurship, scientific report writing on various topics, have been included in the curriculum
PEO3	Students would be benefited with knowledge of core subjects like Plant diversity, Plant taxonomy, Medicinal botany, Physiology and Biochemistry, Molecular biology, Cytogenetics and application of statistics etc. which are offered in these subject modules. Analytical techniques, plant tissue culture and phytochemistry would make to obtain skills in doing research.
PEO4	All the courses in this programme are carefully designed to equip the students for competitive exams like CSIR NET, SET, UGC NET, GATE, IFS, UPSC, etc. and to write research proposals for getting grants.

<b>Program Specific Outcomes (PSOs)</b>	
After the successful completion of PG Botany program, the students are expected to	
PSO1	Gain knowledge about the classification of plants from Cryptogams to Phanerogams, identify the plants in the field, study biodiversity in relation to habitat and correlate with climate change, land and forest degradation. Apply the knowledge of Botany in Agriculture through Phytopathological study. They also will be in a position to trace the evolution of plants through Paleobotany.
PSO2	Be familiar with external and internal characters of plants, identify and classify the plants and also to be familiar in all biochemical and pharmaceutical aspects.
PSO3	Know the fundamentals of Biostatistics and apply the Bioinformatic tools and biophysical principles in relevant biological situations and develop intellectual skills on biological data and databases.
PSO4	Acquire skills about the local, medicinal, rare, endangered, endemic and exotic plants in their original habitats and learn therapeutic values acquired through their physiological pathways and to implement the cultivation practices of plants for effective conservation and future use.

PSO5	To elucidate the molecular and physiological adaptations in plants in response to biotic and abiotic stress. Identify genes responsible for stress tolerance and genetic engineering of plants. Through microbiological concepts the students will be able to inter-relate integral and ubiquitous role of microbes with environment.

<b>PRACTICAL LIST</b>						
1. Write a function 'power()' to raise a number 'm' to a power 'n'. The function takes a 'double' value for 'm' and 'int' value for 'n', and returns the result correctly. Use a default value of 2 for 'n' to make the function to calculate squares when this argument is omitted. Write a main() that gets the values of 'm' and 'n' from the user to test the function.						
2. Write a program to compute compound interest of a given amount AMT for 'n' years. Use function overloading so that the program gets input of interest rate RATE in any of the data type 'float' or 'int'						
3. Create a class which consist of employee detail ENO, ENAME, DEPT, BASIC SALARY. Write a member function to get and display them. Derive a class PAY from the above class and write a member function to calculate DA, HRA and PF depending on the grade and display the payslip in a neat format using console I/O						
4. Define two classes POLAR and RECTANGLE to represent points in the polar and rectangle system. Write a program to convert from one system to another.						
5. Create a class FLOAT that contains one float data member. Overload all the four arithmetic operators so that they operate on the objects of FLOAT.

<b>Course Objectives:</b>							
The main objectives of this course are to:							
<ol style="list-style-type: none"> <li>To enable the students to solve problems in C++ using different numerical methods.</li> <li>To make the mathematical calculations simpler.</li> </ol>							
<p><b>1. friend FUNCTION usage:</b> Create two classes to store the value of distances in meters-centimetres and feet-inches. Write a program that can create the values of the class objects and add one object with another. Use a friend function to carry out addition operation. The result may be stored in any object depending on the units in which results are required. The display should be in the order of meters &amp; centimetre and feet &amp; inches depending on the order of display.</p> <p><b>2. OVERLOADING OBJECTS:</b> Create a class that contains one float data member. Overload all the four arithmetic operators so that operate on the objects of the class.</p> <p><b>3. OVERLOADING CONVERSIONS:</b> Design a class <b>Polar</b> which describes a point in a plane using polar co-ordinates <b>radius</b> and <b>angle</b>. Use the overloaded + operator to add two objects of <b>Polar</b>. Note that we cannot add polar values of two points directly. This requires first the conversion of points into rectangular co-ordinates and finally converting the result into polar co-ordinates. You need to use following trigonometric formulae: <math>x = r * \cos(a)</math>; <math>y = r * \sin(a)</math>; <math>r = \sqrt{x^2 + y^2}</math>; <math>a = \tan^{-1}(y/x)</math>.</p> <p><b>4. OVERLOADING VECTOR:</b> Define a class for Vector containing scalar values. Apply overloading concepts for Vector Addition, Multiplication of a Vector by a scalar quantity, replace the values in a Position Vector.</p> <p><b>5. OVERLOADING MATRIX:</b> Create a class <b>MAT</b> of size <math>m * n</math>. Define all possible matrix operations for <b>MAT</b> type objects. Verify the identity: <math>(A-B)^2 = A^2 + B^2 - 2AB</math>.</p> <p><b>6. INHERITANCE:</b> Create three classes: <b>alpha</b>, <b>beta</b> and <b>gamma</b>, each containing one data member. The class <b>gamma</b> should be inherited from both <b>alpha</b> and <b>beta</b>. Use a constructor function in the class <b>gamma</b> to assign values to the data members of all the classes. Write a program to print the value of data members of all the three classes.</p> <p><b>7. FILE HANDLING:</b> Write a program to create a disk file containing the list of names and telephone numbers in two columns, using a class object to store each set of data. Design an interactive menu to access the file created and to implement the following tasks:</p> <ol style="list-style-type: none"> <li>Determine the telephone number of the specified person.</li> <li>Determine the name if a telephone number is known.</li> <li>Update the telephone number, whenever there is a change.</li> </ol>

## **ELECTIVE 8: MATLAB**

### **List of Practical Problems**

1. Solve the following system of five linear equations:

$$3u + 1.5v + w + 0.5x + 4y = -11.75$$

$$-2u + v + 4w - 3.5x + 2y = 19$$

$$6u - 3v + 2w + 2.5x + y = -23$$

$$u + 4v - 3w + 0.5x - 2y = -1.5$$

$$3u + 2v - w + 1.5x - 3y = -3.5$$

Verify the solution by substituting in all the 5 equations.

2. Create a script file to write a program for saving the output in two files using „fprintf“ command. The program should generate two unit conversion tables. One table converts velocity units from miles per hour to kilometres per hour, and the other table converts force units from pounds to newtons. Save each conversion table to a different text file.
- 3(a) Plot the function  $f(x) = \cos x \sin(2x)$  and its derivative, both on the same plot, for  $\pi \leq x \leq \pi$ . Plot the function with a solid line, and the derivative with a dashed line. Add a legend and label the axes.
- (b) Plot the function,  $r = 3 \cos^2(0.5\theta) + \theta$  for  $0 \leq \theta \leq 2\pi$  using ‘polar’ command.
4. Write a program in a script file that determines  $e^x$  by using the Taylor series representation. The program calculates  $e^x$  by adding terms of the series and stopping when the absolute value of the term that was added last is smaller than 0.0001. Use a „while-end“ loop, but limit the number of passes to 30. If in the 30<sup>th</sup> pass the value of the term that is added is not smaller than 0.0001, the program stops and displays a message that more than 30 terms are needed. Use the program to calculate  $e^2$ ,  $e^{-4}$ , and  $e^{21}$ .
5. Write a programme in a script file that determines the real roots of a quadratic equation  $ax^2 + bx + c = 0$ . Name the file „quadroots“. When the file runs, it asks the user to

enter the values of the constants  $a$ ,  $b$ , and  $c$ . To calculate the roots of the equation the program calculates the discriminant  $D$ , given by:

$$D = b^2 - 4ac.$$

If  $D > 0$ , the program displays message “The equation has two roots,” and the roots are displayed in the next line.

If  $D = 0$ , the program displays message “The equation has one root,” and the root is displayed in the next line.

If  $D < 0$ , the program displays message “The equation has no real roots.”

Run the script file in the Command Window three times to obtain solutions to the following three equations:

$$(a) 2x^2 + 8x + 8 = 0, (b) -5x^2 + 3x - 4 = 0, (c) -2x^2 + 7x + 4 = 0.$$

6. The following data points, which are points of the function  $f(x) = 1.5^x \cos(2x)$ , are given. Use ‘linear’, ‘spline’, and ‘pchip’ interpolation methods to calculate the value of  $y$  between the points. Make a figure for each of the interpolation methods. In the figure show the points, a plot of the function, and a curve that corresponds to the interpolation method.

$X$	0	1	2	3	4	5
$Y$	1.0	-0.6242	-1.4707	3.2406	-0.7366	-6.3717

Also, use the ‘Basic Fitting Interface Tool’ to show the equation, plot residuals, norm of residuals and the fit.

7. Solve:  $\frac{dy}{dx} = \sqrt{x} + \frac{x^2\sqrt{y}}{4}$  for  $1 \leq x \leq 5$  with  $y(1) = 1$ . Plot the solution.
